

## **Sr. Technology Consultant**

**Camden Town, London**

**Permanent Full-time**

**Salary negotiable dependent on experience**

**Benefits: bonus, 25 days holiday + public holidays, pension & healthcare**

### **About**

Our client is a global online media start-up with offices in London and California. A newly created role, the Senior Technology Consultant will be number two to the CTO working in a fast-growing business.

### **Primary responsibilities**

Reporting to the Head of Technology you will have a general oversight and responsibility across a wide range of areas, from corporate IT and in-house platform development to R&D and vendor management.

### **Key tasks:**

- Enterprise policies and configuration
- Liaising with the development team
- Feasibility studies
- Employing technology to automate, streamline, enrich and improve business ops
- Cloud DevOps
- Media and ML R&D
- Reorganization and optimization of existing IT solutions

You will be a techie at heart with a passion for IT. You may have built a custom PC in the past, managed a network, developed code yourself, and worked as part of an agile development stream. You use macros and scripts to automate your daily tasks.

### **Other desirable attributes:**

- Self-starter and enthusiastic
- Strong leadership and stakeholder management skills
- Take enjoyment from the excitement and fluidity of working within a start up
- Strong written and verbal communication
- Approachable and optimistic
- Ability to multitask in a fast-paced environment

### **Skills & Technologies**

- Strong analytical skills (specifically around technical specifications and solution design)
- Coordination / management of projects (experience of using Jira / Trello or similar)
- IP networking / infrastructure design and management
- Strong database design / management / querying skills (MySQL or similar)
- Strong hands-on development / scripting experience (.NET / Node.js / python or similar)
- Advanced OS X / Windows / Linux support and maintenance

### **Desirable**

- GCP, Docker, Kubernetes, Helm, CI/CD
- AV media asset processing experience (FFMPEG framework or similar)

- Machine Learning (model training / classification / on-prem and cloud)

**Qualifications & Experience**

- Degree in Computer Science or equivalent Engineering diploma – desirable
- Demonstrable relevant work experience
